Bamboo veneer is manufactured from bamboo blocks laminated with water-proof adhesive and kiln-dried bamboo strips.

The bamboo blocks are first laminated, then conditioned and soaked for two weeks before being sliced into veneer sheets.

Bamboo veneer is more difficult to produce than conventional solid wood veneers, due in part to the number of glue joints that reduce yield.

Bamboo veneer is backed with either a paper or fabric fleece material to give the product more stability and strength.

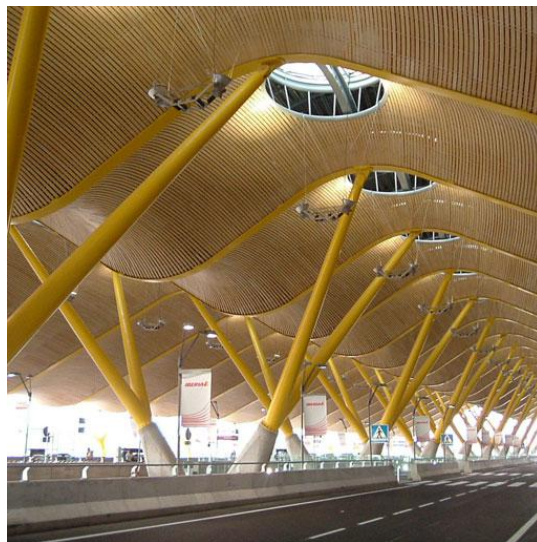

Bamboo Veneer is one of the modern , ecology and natural decoration materials in interior using as facing on Furniture, cabinets, walls, ceiling covering, , club decoration, sports equipment decoration, and as wainscot of surfing board, slide-board, musical instruments, mobile phone shell, electronic products, etc.

Our bamboo thin veneer and sheets has natural texture, simple and natural and advanced surface wear-resisting, tren, which has been widely used in practice and obtain the desired results.
Such as: fire-proof bamboo woven ceiling used in Madrid, Spain, the New International Airport,

Bmaboo Skin Veneers used in TOYOTA headquarters in Europe

Carbonized Bamboo Woven Veneer Mats used in Shanghai Union School
